

Analisis Kinerja Bisnis Kimia Farma Tahun 2020-2023

Kimia Farma - Big Data Analytics

Presented by

Dian Ayu Rahmawati

Dian Ayu Rahmawati

Halo! Aku Dian Ayu Rahmawati, biasa dipanggil 'Dian'. Aku, lulusan SMKN 12 Surabaya jurusan Pengembangan Perangkat Lunak dan Gim.

Aku suka dunia data karena seru aja lihat gimana angka bisa bantu ngambil keputusan yang real buat bisnis. Sekarang aku lagi aktif ikut program, bootcamp, dan buat berbagai project

Sawotratap, Gedangan, Sidoarjo, Jawa Timur

About Company

Industri: Farmasi & Retail Apotek

Layanan: Penjualan obat, farmasi, pelayanan kesehatan

Kimia Farma adalah salah satu perusahaan farmasi terbesar di Indonesia, dan pastinya kita sering lihat apoteknya di mana-mana. Di project ini, aku menganalisis performa penjualan dan layanan cabang Kimia Farma selama 2020–2023. Targetnya adalah memahami tren bisnis dan insight pelanggan dari data realistik skala enterprise.

Project Portfolio

Analisis performa penjualan Kimia Farma (2020–2023)

Dataset: transaksi, produk, cabang, inventory

Output:

- ✓ Tabel analisa di BigQuery
- ✓ SQL Query Insights
- ✓ Dashboard Google Looker Studio - [Dashboard Dian Ayu](#)
- ✓ GitHub Repo - [Repo Link](#)
- ✓ Video Presentasi - [Link Video](#)

Project ini fokus buat nge-explore performa bisnis Kimia Farma dari sisi sales, profit, dan rating customer per cabang. Data yang disediakan mencakup transaksi, info produk, data cabang, dan inventory. Setelah itu, aku bikin data mart di BigQuery, lanjut visualisasi insightnya ke Looker Studio supaya lebih gampang dianalisis.

1. Importing Dataset to BigQuery

1. Pertama, semua dataset aku upload ke BigQuery dalam satu dataset bernama **kimia_farma**.
2. Setelah upload semua tabel, aku cek struktur, sample data, dan count-nya.
3. Baru transaksi di-join jadi satu tabel analisa dengan SQL.

The screenshot displays the Google Cloud BigQuery console. On the left, a sidebar shows the project hierarchy: 'kimia_farma' is expanded, revealing sub-datasets like 'kf_final_transact', 'kf_inventory', 'kf_kantor_caban', 'kf_product', and 'transaction_anal'. The main area is titled 'Recent' and contains a table of recent activities.

Display name	Type	Last modified time ↓	Project
analysis_insight	Query	Nov 3, 2025, 8:22:34 PM	rakamin-kf-analytics-477015
create_analysis_table	Query	Nov 3, 2025, 8:22:33 PM	rakamin-kf-analytics-477015
kimia_farma	Dataset	Nov 3, 2025, 2:59:55 AM	rakamin-kf-analytics-477015
transaction_analysis	Table	Nov 3, 2025, 2:49:27 AM	rakamin-kf-analytics-477015
kf_kantor_cabang	Table	Nov 2, 2025, 10:23:22 PM	rakamin-kf-analytics-477015
kf_product	Table	Nov 2, 2025, 10:22:46 PM	rakamin-kf-analytics-477015
kf_inventory	Table	Nov 2, 2025, 10:21:54 PM	rakamin-kf-analytics-477015
kf_final_transaction	Table	Nov 2, 2025, 10:15:57 PM	rakamin-kf-analytics-477015

Below the table, there is a section titled 'Add your own data' with three options: 'Local file', 'Google Drive', and 'Google Cloud Storage'.

2. Tabel Analisa

- **Tabel: `kimia_farma.transaction_analysis`**
- **Gabung data transaksi + produk + cabang**
- **Hitung:**
 - 1. Nett Sales**
 - 2. Persentase Laba**
 - 3. Nett Profit**

Ini tabel inti buat analisisnya. Intinya aku join empat tabel untuk bikin satu data mart lengkap. Di sini aku juga hitung nett sales dan nett profit berdasarkan ketentuan margin harga. Jadi final table-nya siap dipakai buat dashboard dan query insight lain.

rakamin-kf-analytics-477015 / ... / transaction_analysis 🔍

Schema	Details	Preview	Table Explorer	Preview
	Field name	Type	Mode	
☐	transaction_id	STRING	NULLABLE	
☐	date	DATE	NULLABLE	
☐	branch_id	INTEGER	NULLABLE	
☐	branch_name	STRING	NULLABLE	
☐	kota	STRING	NULLABLE	
☐	provinsi	STRING	NULLABLE	
☐	rating_cabang	FLOAT	NULLABLE	
☐	customer_name	STRING	NULLABLE	
☐	product_id	STRING	NULLABLE	
☐	product_name	STRING	NULLABLE	
☐	actual_price	INTEGER	NULLABLE	
☐	discount_percentage	FLOAT	NULLABLE	
☐	persentase_gross_laba	FLOAT	NULLABLE

☐	nett_profit	FLOAT	NULLABLE	
☐	rating_transaksi	FLOAT	NULLABLE	

3. BigQuery Syntax

SQL aku bagi dua – satu khusus buat bikin data mart, dan satu lagi buat query insight yang nanti dipakai juga buat dashboard. Query-nya mencakup tren penjualan per tahun, ranking cabang per provinsi, sampai ngecek gap antara rating cabang dan rating transaksi.

File SQL:

create_analysis_table.sql

analysis_insight_queries.sql

```
1  -- Year Over Year Nett Sales
2  -- =====
3  SELECT
4    EXTRACT(YEAR FROM date) AS year,
5    SUM(net_sales) AS total_sales
6  FROM kimia_farma.transaction_analysis
7  GROUP BY year

30   END AS nett_profit,
31   t.rating AS rating_transaksi
32 FROM `kimia_farma.kf_final_transaction` t
33 LEFT JOIN `kimia_farma.kf_product` p USING(product_id)
34 LEFT JOIN `kimia_farma.kf_kantor_cabang` c USING(branch_id);
```

4. Dashboard Performance Analytics

Setelah datanya siap, aku bikin dashboard interaktif di Looker Studio. Ada KPI utama, grafik YoY, ranking provinsi, sampai geo-map profit biar kelihatan performa regional-nya.

[Dashboard Link](#) Ini isi dashboardnya:

- ✓ KPI scorecard (Sales, Profit, Rating)
- ✓ Time series trend
- ✓ Top 10 cabang
- ✓ Geo map profit
- ✓ Filter interaktif

Thank You
